

Morphology Marine Biology

Directions:

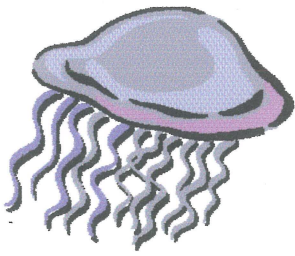

- 1) Copy phylums and animals on card stock**
- 2) Have the students sort the animals**
- 3) Give them the phylums and discuss the meanings**
- 4) Have the students resort the animals via phylums**

ALS: Marine Biology

Phylum: Coelenterata

Coral, jellyfish, sea anemones

Phylum: Echinidermata

Sea stars, starfish, sea urchin,
sea cucumbers, sand dollars

Phylum: Arthropoda

crabs, shrimp, lobster

Class: Crustaceous

crabs, shrimp, lobster

Phylum: Mollusca

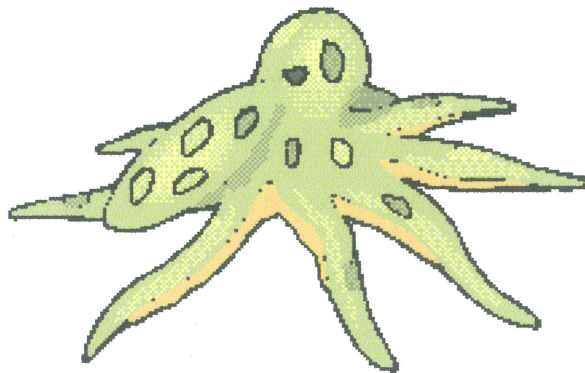

squid, octopus, clams,
oyster, cuttlefish

Class: Cephalopods

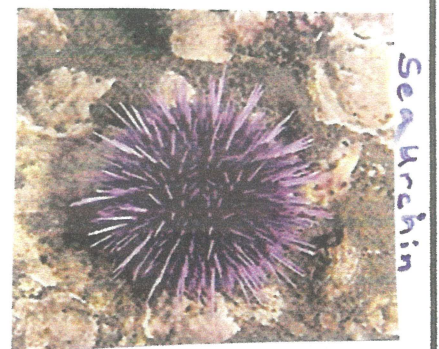

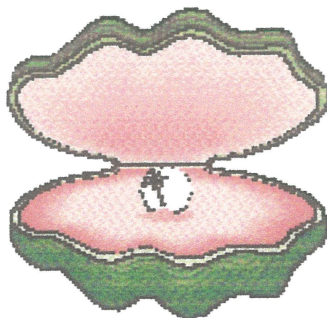

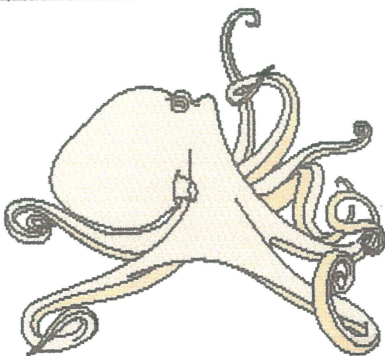

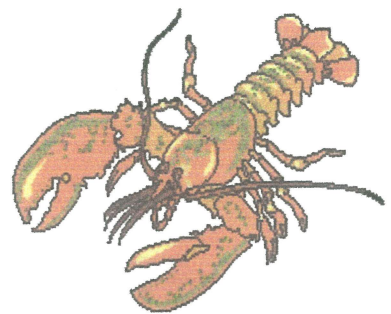

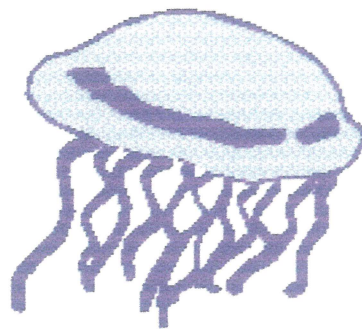

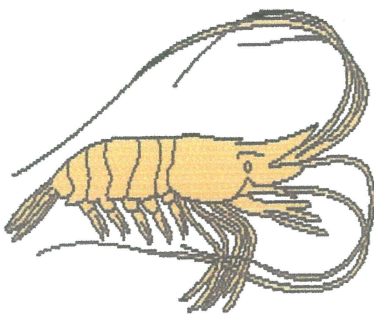

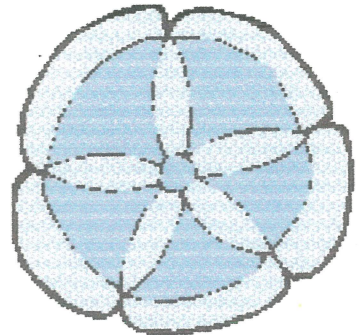

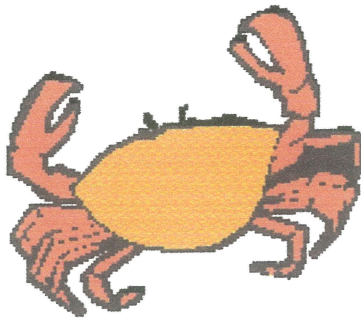

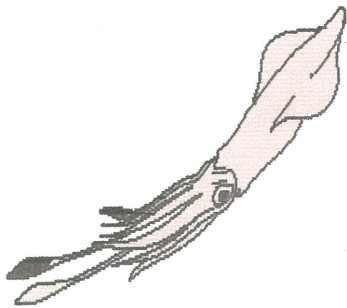

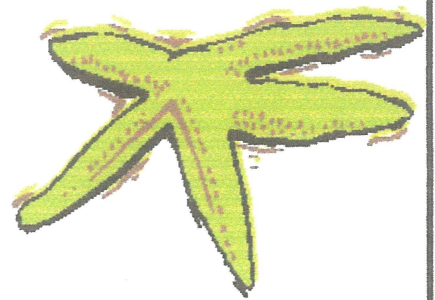

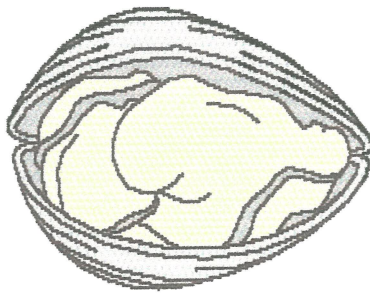

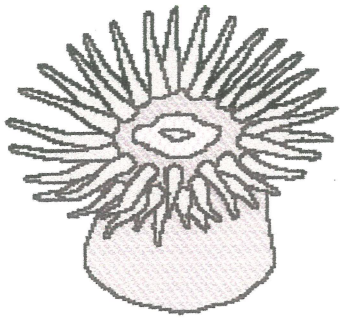

Squid, octopus, cuttlefish

Class: Bivalve

Oyster, clam

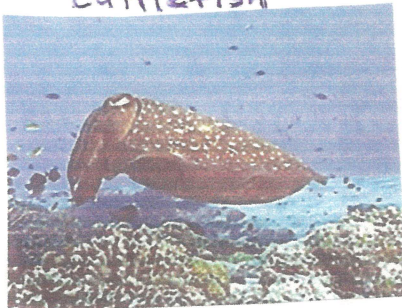

Phylum Coelenterata “hollow”	Phylum Echinodermata “spiny” (like sea urchin skin)	Phylum Arthropoda “externally jointed appendages/feet”
Phylum Mollusca “soft”	Class Cephalopoda “head/foot”	Class Bivalvia “two valves”
Phylum Coelenterata “hollow”	Phylum Echinodermata “spiny” (like sea urchin skin)	Phylum Arthropoda “externally jointed appendages/feet”
Phylum Mollusca “soft”	Class Cephalopoda “head/foot”	Class Bivalvia “two valves”

Coral

Cuttlefish

Sea Cucumber
