

Alphabet Recognition/Sequencing

Directions:

- 1) Teach the letter names of the letters on the strip (a to g). You may do it one at a time and after finishing all these letters, then use this strip. Introduce the student to the letters by using multisensory procedures - show letter, say name, students repeat and skywrite as they say the letter name. Do the skywriting 3 times as they say the letter name.
- 2) The strip can be folded on the dotted line. Show only the first part. Students say the letter names as they skywrite or if one-on-one, he places his finger on the letter as he says the letter name.
- 3) Teacher asks *before* and *after* questions: "What letter comes before *c*?" "What letter comes after *d*?" Teacher may also ask the student to point to or name the vowels.
- 4) Show the second part with missing letters. Students read and fill in the missing letters (skywriting or placing his finger on the letter or the blank).
- 5) Show the third part with the missing letters. Repeat procedures.
- 6) Continue with the letters on the second strip and...
- 7) Combine strip one and two and have the students say letter names as they skywrite.
- 8) Continue the process by adding other strips.
