

Burn-Proof Words

Orton-Gillingham Concept: “ur” words

Science: Heat

Directions:

1. Cut out a piece of paper (2 1/2 inches to 4 inches) for each student.
2. Have them write “ur” words that you dictate to them.

burn turn burst hurt blurt curt

lurk purse curve spur curse

3. Teacher takes one of the slips of paper from the students and tapes it securely to a glass tumbler (along the two ends of the paper).
4. Teacher notes that the paper with the words is “burn proof.”
5. Use a lighter or match and place the flame under the paper. No matter how long the flame is held directly on the paper, it will not burn.

Science principle: The glass tumbler disperses the heat of the flame such that the temperature never reaches the combustion point of the paper.
