

Magic-e Words

Orton-Gillingham Concept: Magic-e

Science: Light and symmetry

Materials:

1. Attached sheets with Magic-e words
2. Mirror
3. Scissors

Directions:

1. Give the attached sheets to the students. Have them read the words.
2. Cut out the words.
3. Then cut the words in half along the dotted lines.
4. Throw away the upper half of the words.
5. Place a mirror along the upper margin of the remaining part of the word.
6. Look into the mirror and you will see the whole word.

Explanation: The letters used to make the words can be divided into identical lower and upper halves. If one half is thrown away, it can be replaced by the reflection of the other half. Letters that have this symmetry are upper case B, C, E, H, I, K, O, and X.

Magic-e Words

Orton-Gillingham Concept: Magic-e Rule

Science: Effect of bases on phenolphthalein

Materials:

1. Large piece of paper
2. Phenolphthalein
3. Windex
4. Q-tips

Directions:

1. Write the following words in a column:

mad pan pin cod tam rod rip

mad e

pan e

pin e

2. Dip the Q-tip in phenolphthalein and write “e” after each word.
3. Have students read the words. The teacher then talks about the Magic-e rule. Then spray the words with Windex and the “e’s” will turn pink. Have the students then read the “new” words with the Magic “e”.

Explanation: Phenolphthalein is acid/base indicator. It will turn pink when mixed with a base such as Windex or diluted baking soda. It will remain colorless when mixed with an acid.
